Reliability

The Reliability of Everything[™] : From Its Beginning To Current Challenges

Best Practices Webinar Series

Meet the Speaker

Dr. Klaus M. Blache – PhD, MBA, MSCE, BIE, CPE

Director – Reliability and Maintainability Center

Research Professor – University of Tennessee, College of Engineering

- Over 35 years in industry, managing and implementing continuous improvement in industry. (such as Corp. IE Manager, North America Head of R&M, and Mfg. Engineering Director at General Motors). Past 2-year Chair of SMRP
- Current focus is helping industry and academia transition to Industry 4.0 and creating opportunities for industry to improve ROI
- RMC does R&M training, facility assessments, applied company specific research, proof of concepts, student internships and more
- Lectures globally and has written over 200 articles on related topics

Today's Discussion

1. Evolution of Asset Management and Reliability
2. Observed Operational Challenges and Opportunities
3. What the Best Companies Do
4. Transitioning to Manufacturing 4.0

POLL QUESTION No. 1

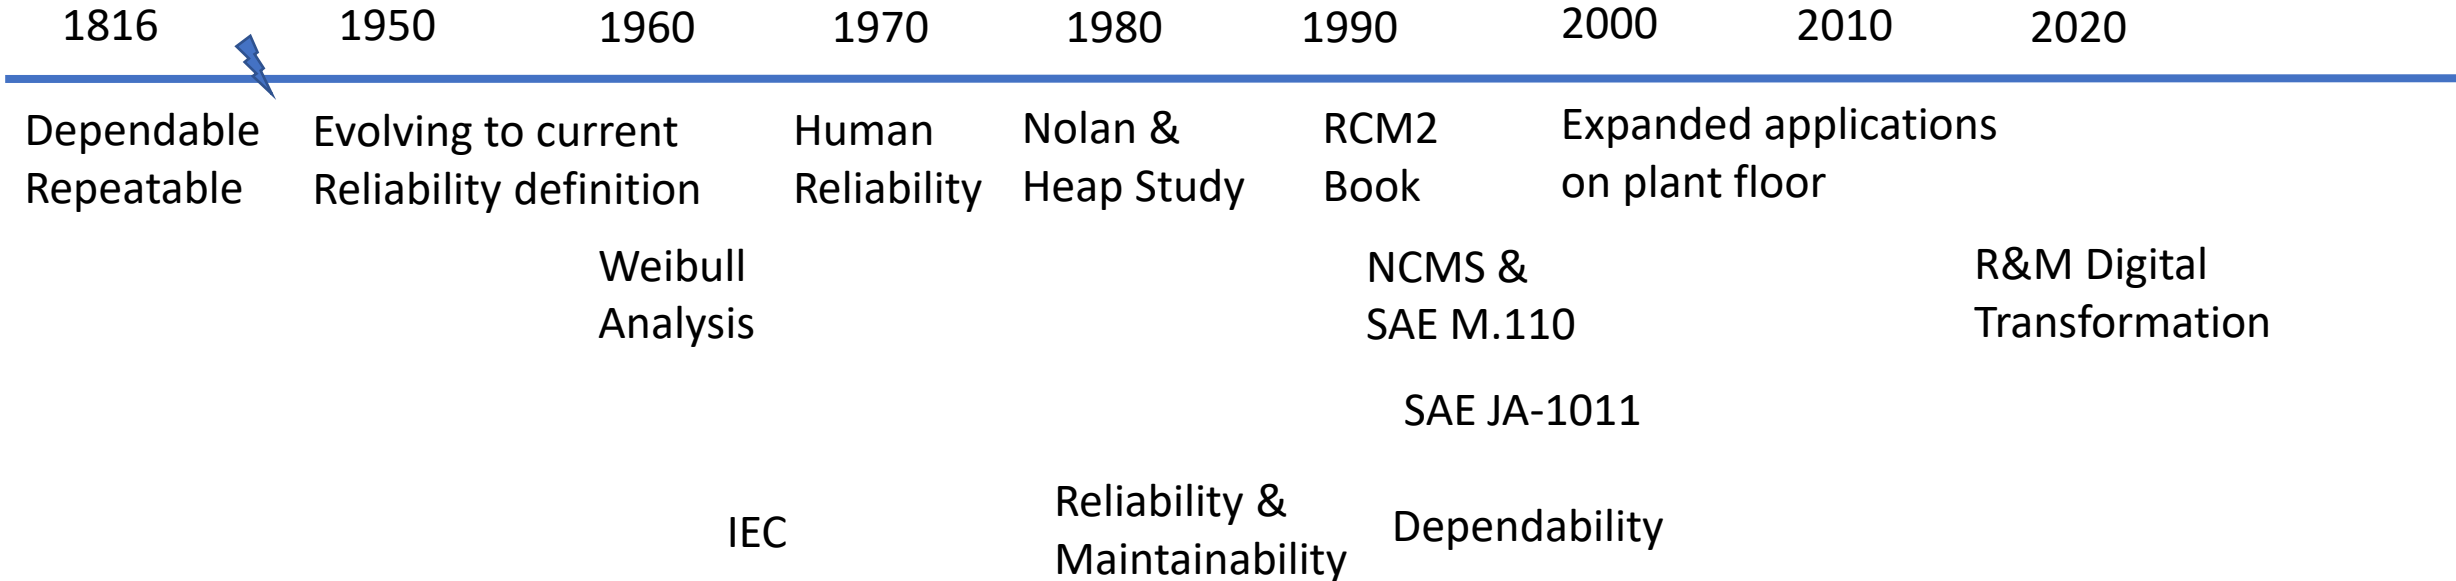

When was the word Reliability first used ?

(Click only one answer)

- 1816
- 1927
- 1948
- 1955

Evolution of Asset Management - Maintenance / Reliability

+ High-Level Overview of Reliability Beginnings

- **Fix it when it's broke**

- **Systems to plan & control work**
- **Large scale maintenance projects**
- **Some computer usage**

- **Design for R&M**
- **Sophisticated CMMS & Expert Systems**
- **FMEA, PMO, RCA, Hazard/Integrity Windows**
- **Multiskilling, Teams**
- **Condition Monitoring, PdM**
- **RCM**

- **Systems Thinking**
- **Real-time data**
- **Learning systems**
- **Wireless**
- **Mobility**
- **Integration**
- **Cloud**

Operational Challenges & Opportunities

- Need to do more with less (reduce cost /unit)
 - More throughput from existing assets
 - Decrease downtime
 - Improve Return on Investment
 - Life-cycle decisions on assets

Operational Challenges & Opportunities

Employers do not fully understand why employees are leaving.

Factors that are important to employees versus what employers think is important

► Employers seem to overlook the relational elements that are key drivers for why employees are leaving, such as lack of belonging or feeling valued at work.

More important to employees than employers appreciate
As important to employees as employers think

More important to employees than employers expectations

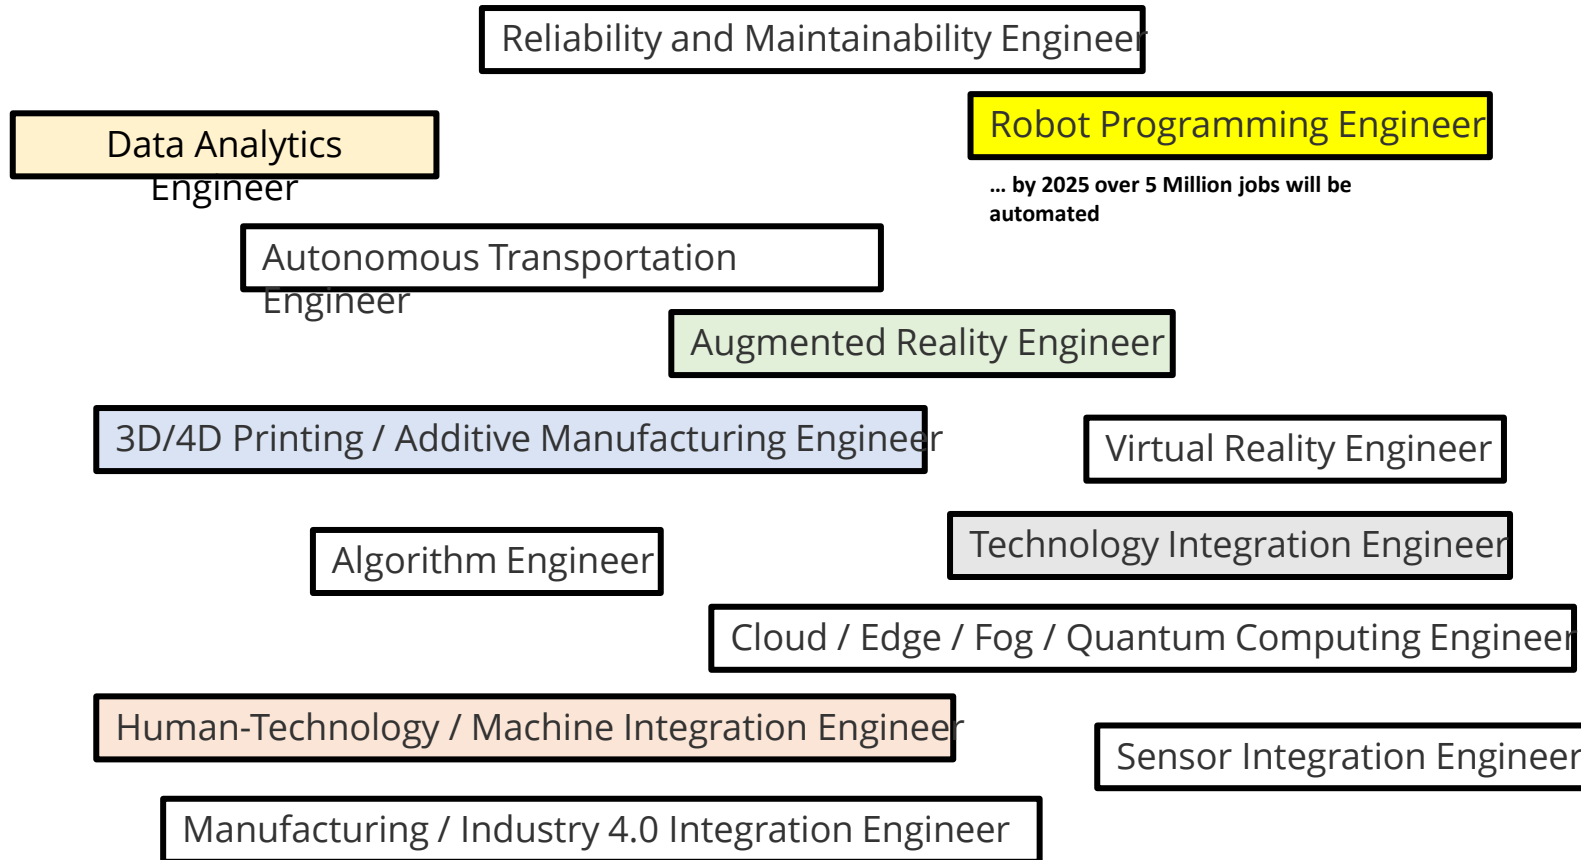

Flexible Work Schedule

Note: Standardized scores are reported for both employee and employer perspectives. Employees were asked to respond to the following question: To what extent did the following factors impact your decision to leave your last job? (Not at all, slightly, moderately, very much, extremely); employers were asked to respond to the following question: Why do you think employees are choosing to leave your organization now? (select all that apply)
*Includes clients, customers, patients, and students.

Operational Challenges & Opportunities

- Workforce availability / loss of skills
 - There is a growing number of older workers
 - When they leave, critical skills go out the door
 - Most of your workforce will be Millennials
 - People have changed their expectations on remote work

What is changing in R&M in the next 10 years

Operational Challenges & Opportunities

- Insufficient understanding / compliance / KPI alignment on what matters
 - Lack of a Reliability & Maintainability Roadmap Linked to Corporate Strategy
 - What are the levers that will give you the greatest ROI ?
 - Understand the informal processes and hidden costs
 - Are your KPI's aligned properly ("line-of-sight" from top of organization to plant floor) to enable results

POLL QUESTION No. 2

What percent of your maintenance hours are Reactive ?

(Click only one answer)

- Less than 10%
- > 10% to 25%
- >25% to 50%
- Over 50%

Over half of the facilities / factories in North America still rely on too much Reactive Maintenance as a major part of their daily maintenance activity.

Operational Challenges & Opportunities

Cumulatively, ignoring so many things (that individually don't seem that significant) makes your R&M process dysfunctional.

Operational Challenges & Opportunities

- **People not being held accountable for not following the plant processes**
 1. Do you have standardized work processes ?
 2. Do you have an individual/small team continuous improvement process ?
 3. Do you have a methodology to improve and sustain the thinking process to one of ongoing improvement ?

..... and how well are they working for you ?

POLL QUESTION No. 3

How much of a roadblock is culture change - moving to proactive maintenance, moving to the digitalization of R&M, implementing new technologies, etc. ? **(Click only one answer)**

- Minimal Issue
- Moderate Issue
- Significant Issue
- Largest Issue

Operational Challenges & Opportunities

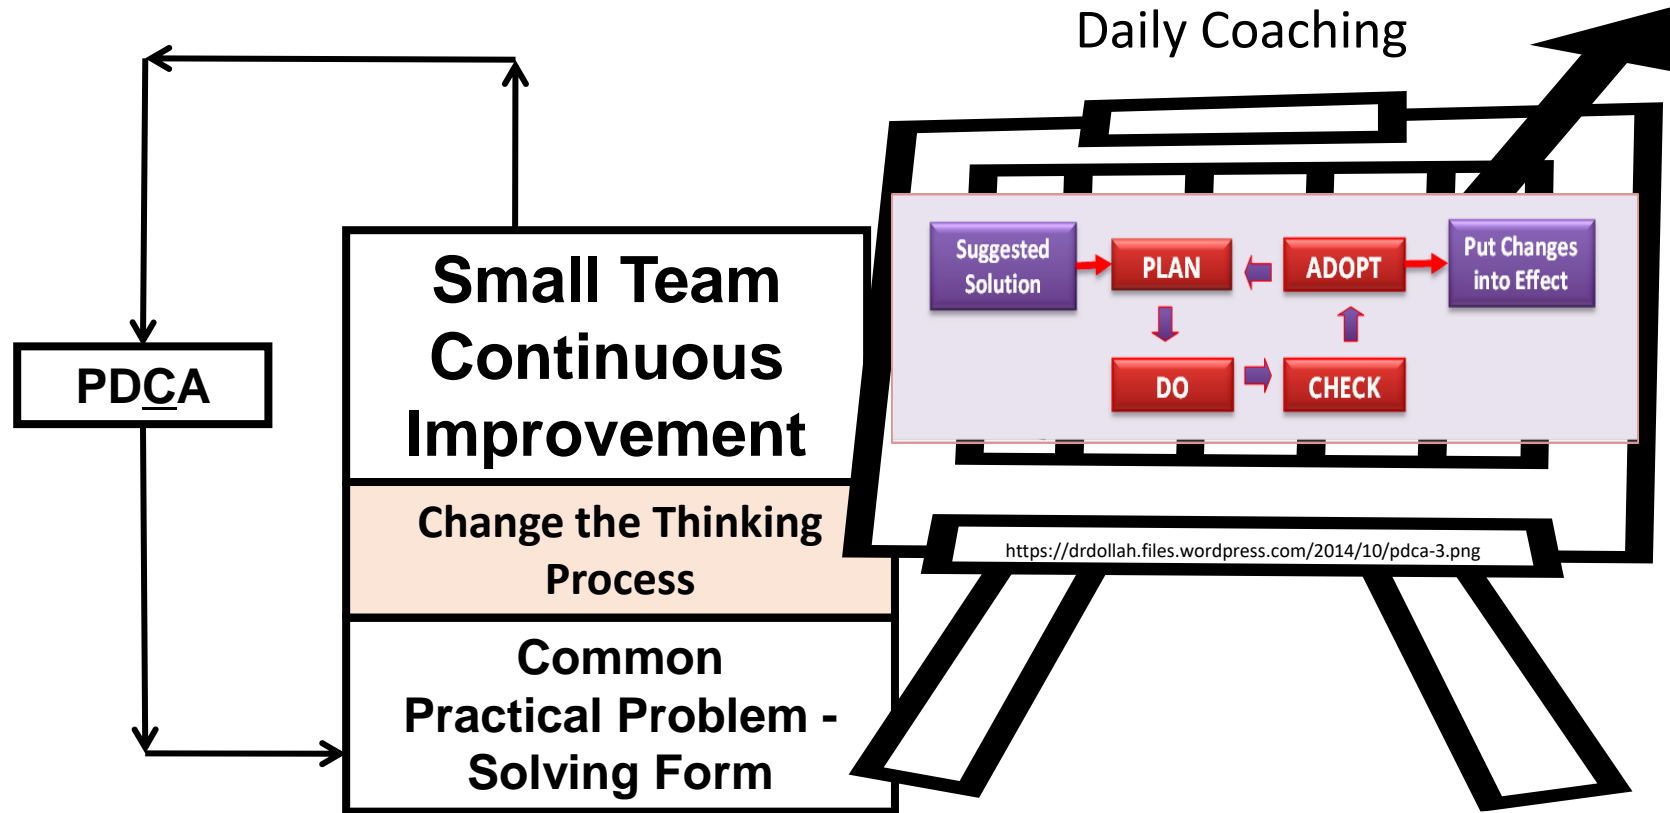

- Over 70% of companies point to culture as the main roadblock to R&M best practices
- Difficulty in changing from a Reactive to Proactive Maintenance mindset
 - Historical dysfunctional process and engrained culture that supports old processes
 - Many organizations think that they are better than they are
 - How it's all related and the impact on operational excellence is not fully understood, so there is a lack of support from other plant functions

“All companies have a culture,
some companies have discipline,
but *few companies have a culture of discipline.*”

- When you have *disciplined people*, you don't need hierarchy.
- When you have *disciplined thought*, you don't need bureaucracy.
- When you have *disciplined action*, you don't need excessive controls.”

With a culture of discipline, where people know what to do and are capable of and willing to do it, great performance is a natural outcome.

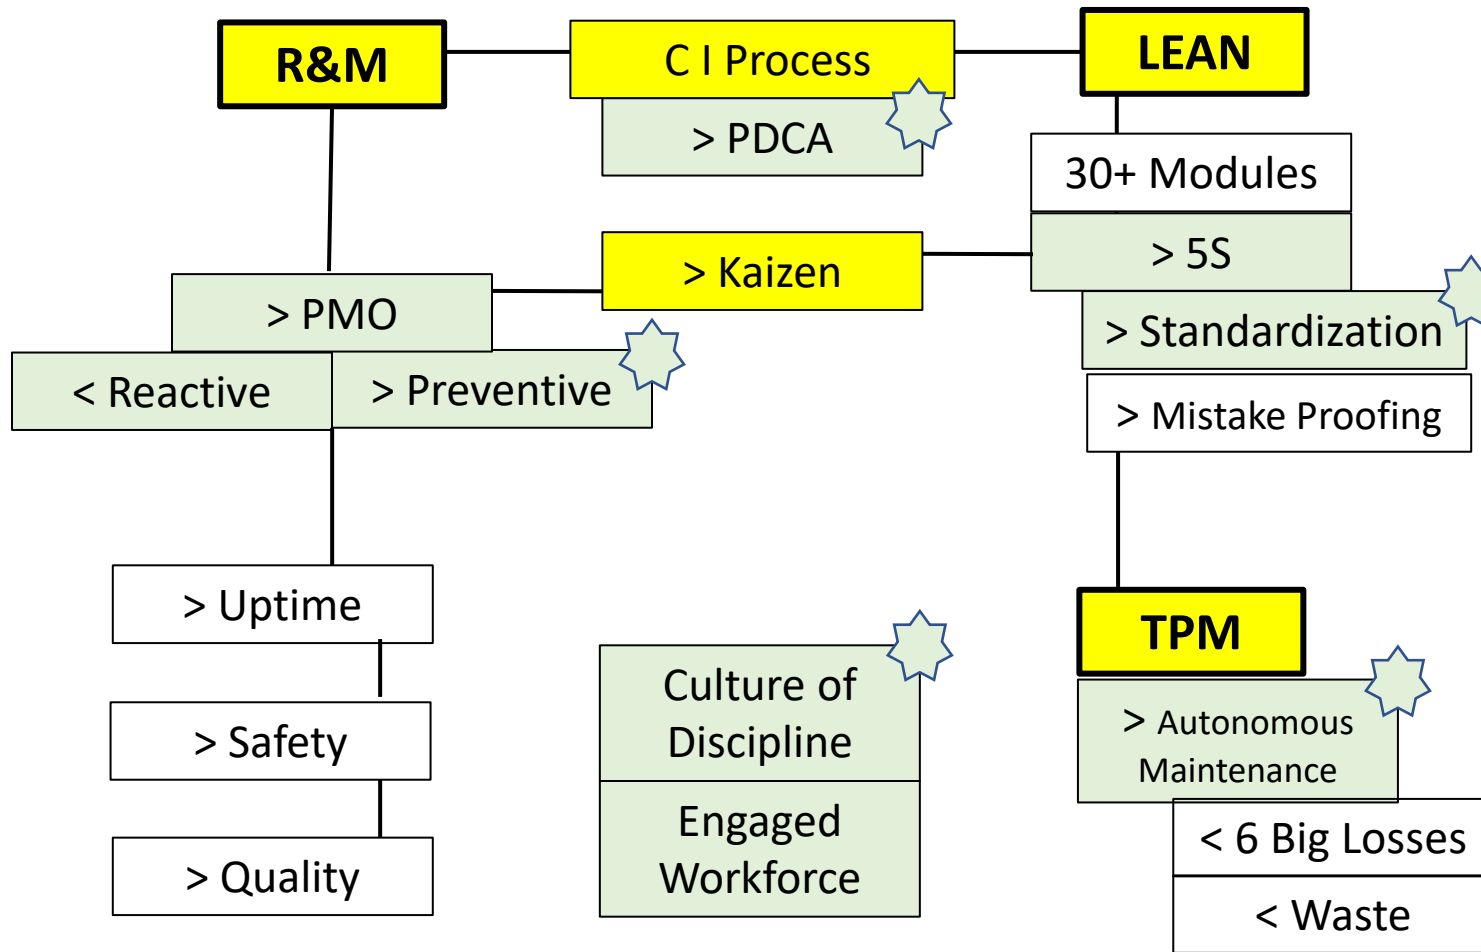

What the Best-of-the-Best Do Better

Mainstream Improvement Process
(Best Plants)

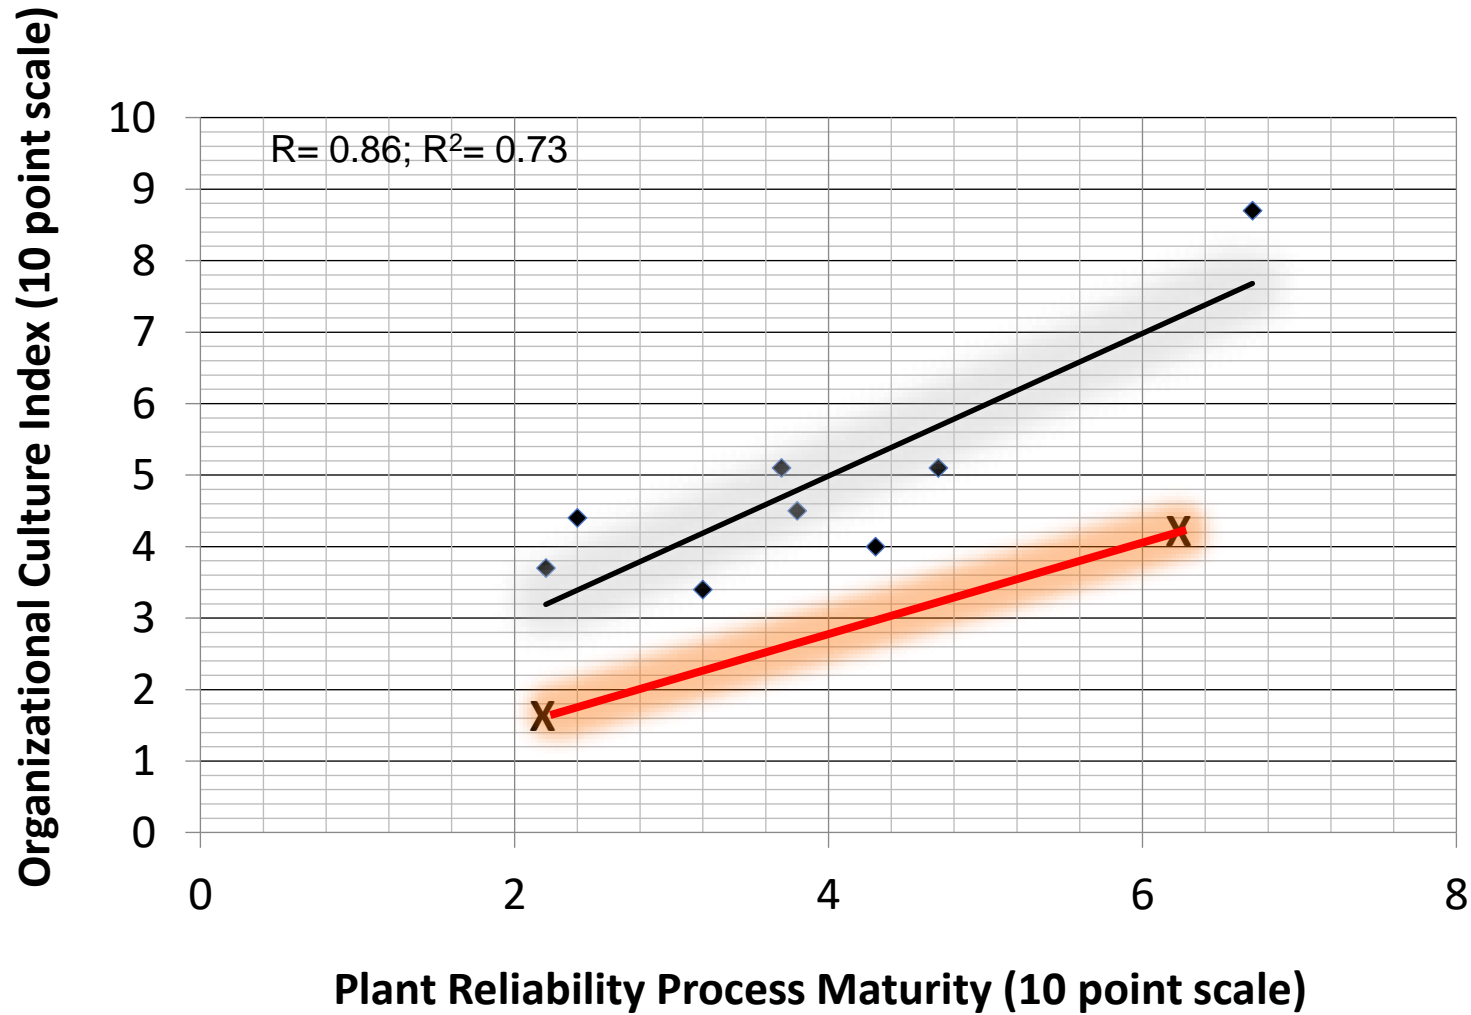

Strategy for success

Successful R&M Implementation is a
Socio-technical Process

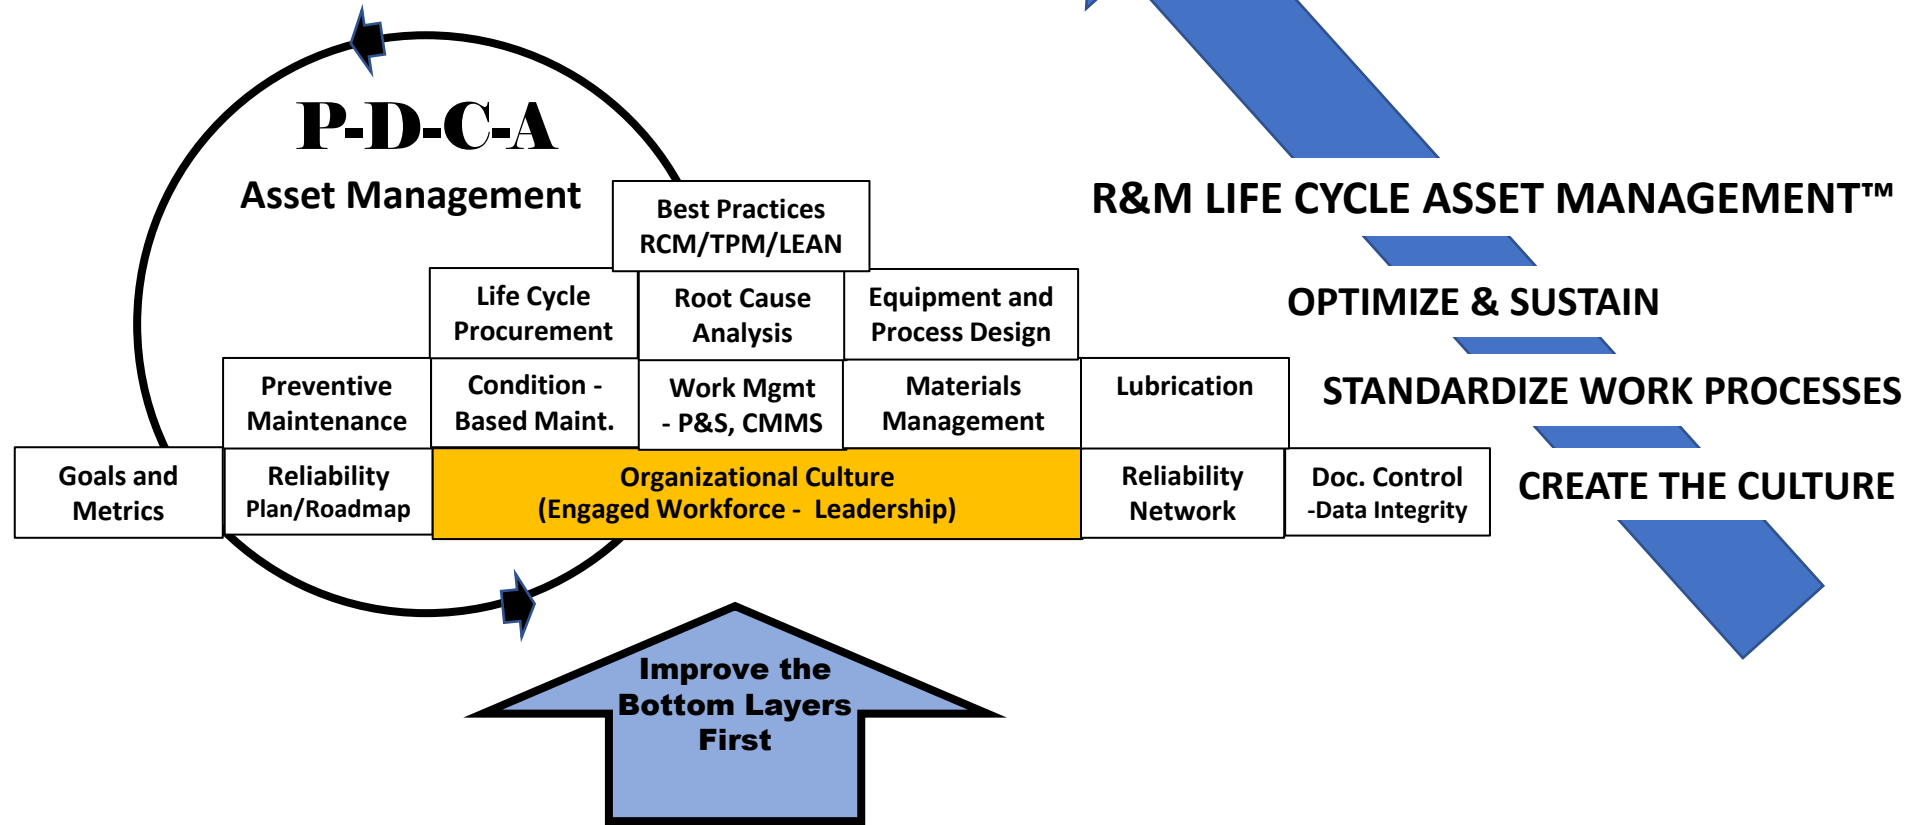

An engaged workforce, with a culture of discipline is what's missing in most situations.

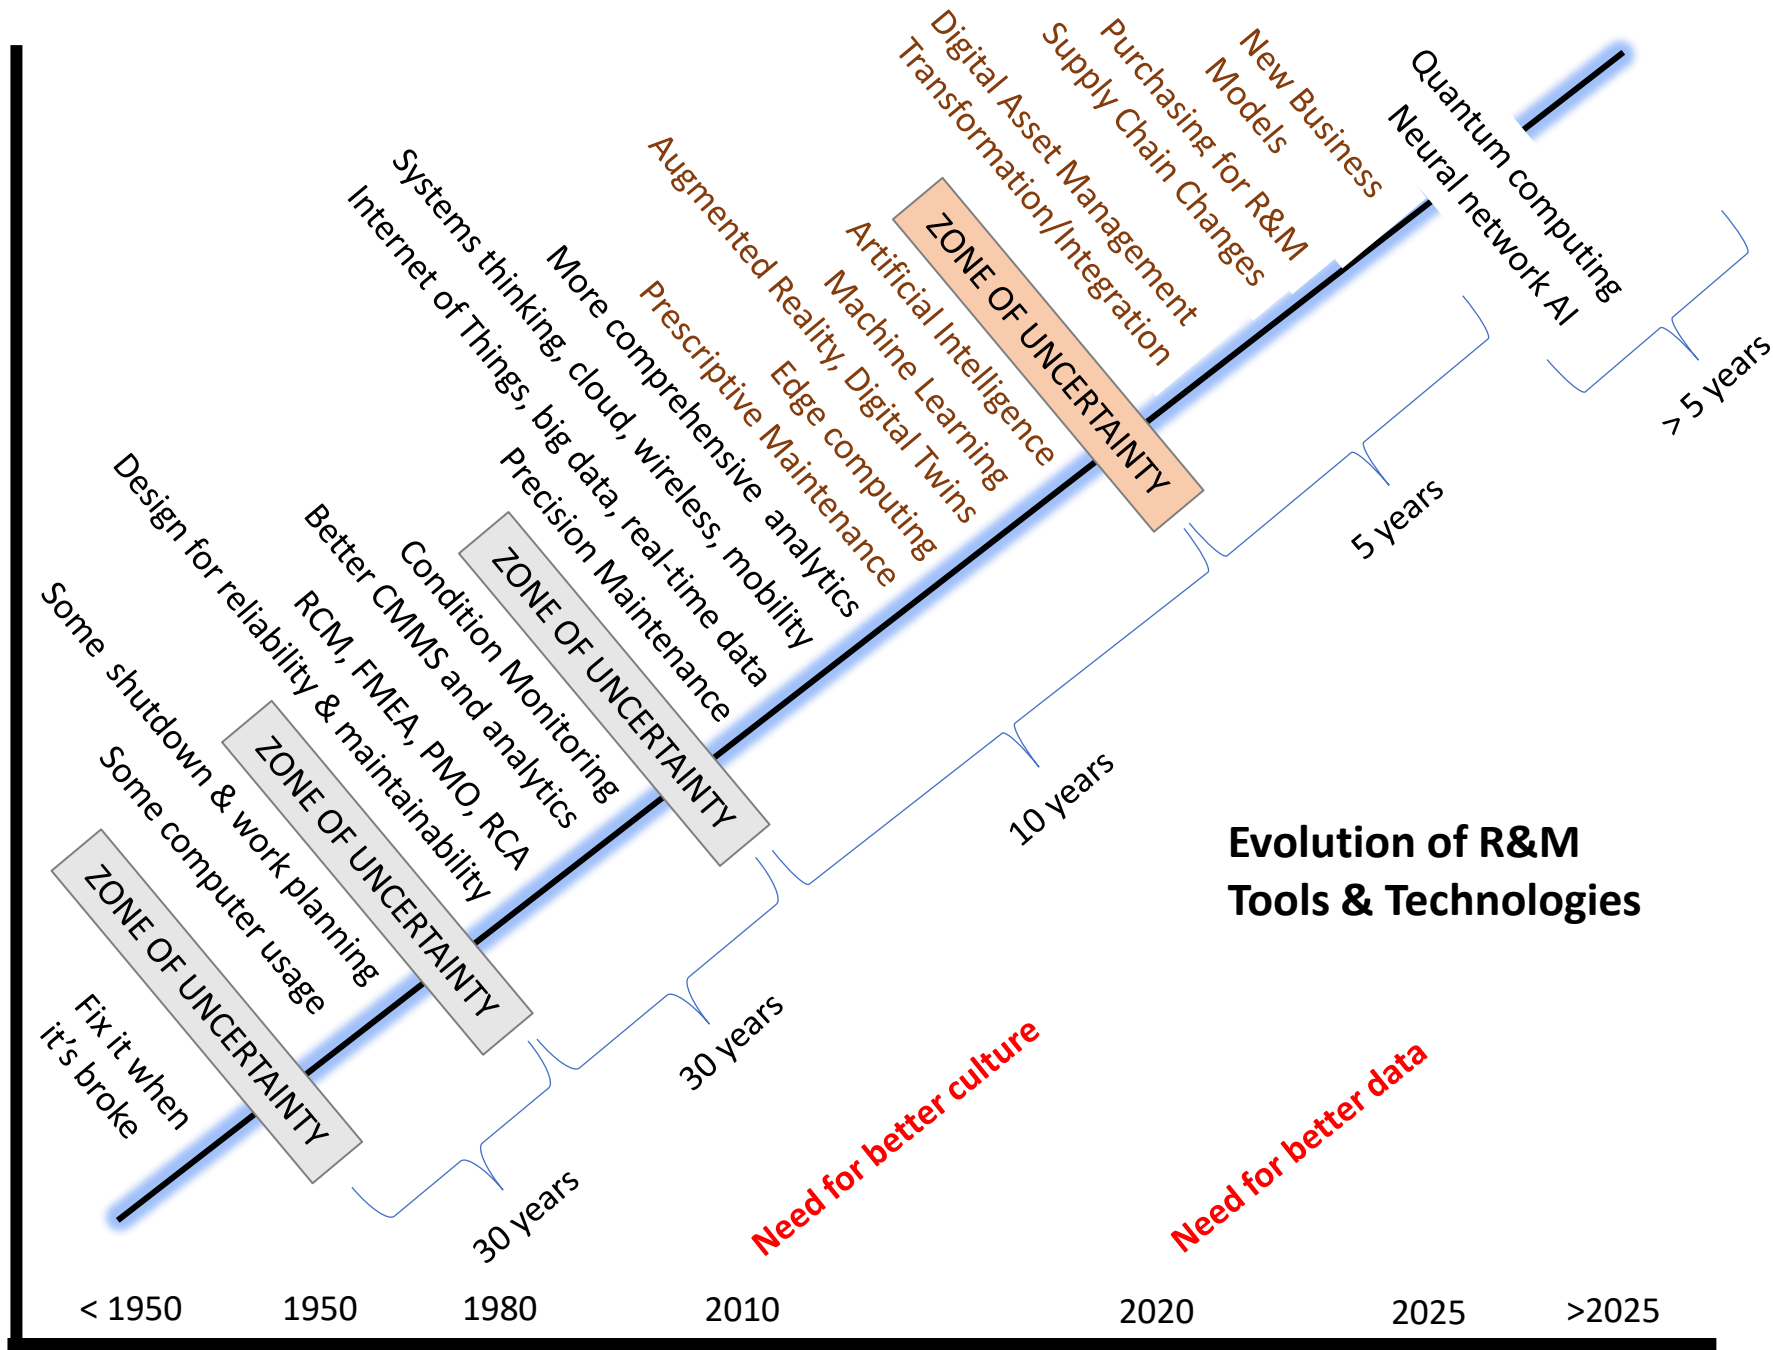

Organizational culture and reliability process maturity

R&M COMPETITIVE EXCELLENCE™

Increasing Acceptance, Usability and ROI →

Increasing Capability With New Tools & Techniques →

Digital Technology Adoption North America
