CONFERENCE

FLUKE

Xcelerate 26: Your Classroom for the Future of Reliability

What is Xcelerate?

Fluke's Xcelerate Conference is a three-day event where industry leaders come together to share ideas and explore the latest innovations from the full suite of Fluke products. If you use eMaint, Prüftechnik, or Azima tools and software, Xcelerate is where you'll find the latest advancements, training opportunities, and real-world applications to help you solve your toughest reliability challenges.

From presentations with in-house experts to real-world customer success stories, Xcelerate connects your team with fresh insights you can take home. Learn more about how to leverage the latest features and tools, whether you're new to reliability or a seasoned expert. At Xcelerate, you'll discover new solutions, practical strategies, and actionable ideas to drive reliability through.

- ✓ **Proven approaches** from maintenance and reliability leaders.
- ✓ **Real-world stories** of how peers are driving measurable results.
- ✓ **A first look** at new features, products, and tools.
- ✓ **Hands-on training and certifications** in areas like condition monitoring, automation, and anomaly detection.
- ✓ **Strategies** to leverage AI, predictive maintenance, and advanced technology to strengthen resilience.
- ✓ **Exclusive opportunities** to speak with respected global experts.

Get a glimpse of the lessons, strategies, and expertise waiting for you at Xcelerate:

Case Study: T. Baker Smith

T. BAKER SMITH

T. Baker Smith offers surveying, engineering, and environmental services to both public and private clients. Even though they were already seasoned eMaint users prior to the 2025 Xcelerate conference, company employees were profoundly impacted by the valuable insights gained, particularly around the use of eMaint X4. They are eagerly anticipating Xcelerate 2026.

The Opportunity

T. Baker Smith had been leveraging eMaint for two years prior to the Xcelerate 25 conference, using the software to manage preventive maintenance and capital expenditure planning for its surveying, engineering, and natural resource services. The company had already achieved an incredible 75% reduction in downtime while improving budget forecasting accuracy and capital management.

Before attending Xcelerate 2025, “we thought we already had all the solutions we needed,” said Chad Burton, field manager at T. Baker Smith. But the conference soon proved them wrong.

The Experience

The Xcelerate25 Conference offered T. Baker Smith a unique opportunity to strategize for the future and maximize the potential of the eMaint software they already use. For Burton and his team, the insights from Xcelerate were eye-opening and have allowed him to deepen his product knowledge and learn from other reliability leaders.

“It’s been nice to see how other people leverage eMaint, what they’re doing, and their thought process,” Burton explained. “Even if it’s something we might not be able to leverage right away.”

The Impact

After spending just a few days at Xcelerate, Burton and his team walked away with pages of notes and new insights about how they could get even more out of eMaint.

“The conference has been awesome,” he said. “The location is awesome, and it has a lot of great speakers.”

“It really gets you excited to go back and make some of these changes and tell more people in the company how we can leverage eMaint,” said Burton. “I hope I get to go to Xcelerate 2026.”

“At Xcelerate you have a whole network of people constantly trying to work for better solutions. You don’t have to come up with the solution yourself; you can learn new ideas from others.”

Chad Burton, Field Operations Manager, T. Baker Smith
